

Website Audit

ACME Motors

Prepared for Sample Recipient

Audit period: May 2026

Site scanned: <https://www.acmemotors.example>

0/100

Overall Website Score

Top three issues to address

1. [Horizontal scroll on mobile \(high\)](#)

Your homepage scrolls sideways on a phone. Customers read that as a broken site and leave. Fix the layout so everything fits within the screen width on mobile.

2. [Slow page load \(LCP > 4s\) \(high\)](#)

Your VDP loads slowly. Customers walked away from your front-row vehicle before they could read the price sticker. Compress your photos and load them lazily.

3. [Lighthouse performance score below 50 \(high\)](#)

Independent performance scoring rates your site below 50 out of 100. That is the band where Google search rankings start to penalize you. Treat performance as a brand asset.

Performance + Mobile Scorecard

What your visitor experiences in the first three seconds.

Lighthouse performance score: 38 / 100

Largest Contentful Paint: 5.40 s

Cumulative Layout Shift: 0.180

Total Blocking Time: 720 ms

First Contentful Paint: 2.80 s

Accessibility score: 64 / 100

SEO score: 72 / 100

Mobile readiness

Viewport meta present: yes

Horizontal scroll at 390 px: yes

Small tap targets count: 9

Network footprint

Requests on homepage: 168

Total bytes downloaded: 4.20 MB

Largest single resource: 1.40 MB

Conversion + Inventory Presentation

Where shoppers fall out of the funnel.

Homepage funnel readiness

Phone number visible: no
Inventory link in nav: yes
Trade-in tool link: no
Financing / pre-qual link: no
Above-the-fold lead form: no
Primary form field count: 14
Third-party review widget: no

Inventory presentation (sampled VDPs)

Samples taken: 3
Average photo count per VDP: 6.0
VDPs with Vehicle schema: 0/3
VDPs with walkaround video: 0/3
VDPs with history link: 0/3
VDPs showing price clearly: 2/3
VDPs lazy-loading photos: 0/3

Recommendations

1. Horizontal scroll on mobile (high, mobile)

Action: Your homepage scrolls sideways on a phone. Customers read that as a broken site and leave. Fix the layout so everything fits within the screen width on mobile.

Outcome: Mobile time-on-site increases. Customers reach your inventory grid instead of leaving from the homepage.

2. Slow page load (LCP > 4s) (high, perf)

Action: Your VDP loads slowly. Customers walked away from your front-row vehicle before they could read the price sticker. Compress your photos and load them lazily.

Outcome: VDPs load in under three seconds. Inventory page-views per session rise.

3. Lighthouse performance score below 50 (high, perf)

Action: Independent performance scoring rates your site below 50 out of 100. That is the band where Google search rankings start to penalize you. Treat performance as a brand asset.

Outcome: Search visibility recovers. Paid-search clicks convert more of the visitors you are already paying for.

4. VDPs have fewer than 8 photos (high, ux)

Action: Customers spend three times longer on VDPs with twelve or more photos. Your average VDP shows fewer than eight. Take more photos at every angle and add interior detail shots.

Outcome: Time-on-VDP doubles. Lead form submissions per inventory view rise.

5. Price hidden behind 'call for price' (high, conversion)

Action: More than a third of your VDPs hide the price behind 'call for price'. Today's customers will not call. They will go to a competitor who shows the number.

Outcome: More form submissions from intent-stage shoppers. Phone calls don't drop, because the high-intent caller still calls.

6. Lead form has too many fields (high, conversion)

Action: Top-converting dealer sites use eleven or fewer fields in initial lead capture. Your form has more. Cut every field that isn't strictly required.

Outcome: Form completion rate rises 20-40%. Lead volume grows without ad spend changing.

7. Lead form missing TCPA consent text (high, compliance)

Action: Your lead form does not show TCPA consent text. Calling or texting customers without explicit consent creates regulatory risk. Add a checkbox and the standard consent language.

Outcome: Phone and SMS outreach are TCPA-compliant. Lower legal risk.

8. Tap targets too small on mobile (medium, mobile)

Action: Several buttons and links on your homepage are too small to tap reliably on a phone. Buttons should be at least 44 by 44 pixels. Resize them.

Outcome: Fewer mistaps. More customers reach the contact form or inventory page on the first try.

The Wolfpack Dealer Excellence Program

This audit is one of several engagement-opener artifacts in the Wolfpack Dealer Excellence Program. The full program closes the gaps surfaced here and ties measurable outcomes back to operations. Book a 30-minute conversation:
